RESEARCH INTERESTS

My research lies at the intersection of theoretical and applied machine learning. On the theoretical side, I am interested in establishing provable guarantees for the generalization and optimization of machine learning algorithms. On the empirical side, I have hands-on experience with large-scale LLM pre-training and am committed to designing efficient optimization algorithms that improve the scalability and performance pre-training.

I have worked on topics including:

- Parameter Efficient Fine-tuning of LLMs.
- Scalable model merging.
- Generalization guarantees of machine learning algorithms.
- Implicit bias and their empirical signals.
- Optimization Algorithm for structured problems.
