RESEARCH INTERESTS

My research lies at the intersection of theoretical and applied machine learning. On the theoretical side, I am interested in establishing provable guarantees for the generalization and optimization of machine learning algorithms. On the empirical side, I have hands-on experience with large-scale LLM pre-training and am committed to designing efficient optimization algorithms that improve scalability and performance in pre-training.

I also have in-depth practical experience in quantitative research and have interned at top-tier quantitative trading firms, including Citadel Securities and Jump Trading.

I have worked on topics including:

- Efficient and stable optimizers for LLM pre-training.
- Adaptation of LLMs, e.g., parameter-efficient fine-tuning and scalable model merging.
- Generalization guarantees, implicit bias, and corresponding empirical signals in machine learning.
- Upper and lower convergence bounds for optimization algorithms on structured problems.

INDUSTRY EXPERIENCE

Citadel Securities <i>Quantitative Research Intern</i> • Built LLM pipelines to extract signals and build alphas from text-based alternative datasets. Received return offer.	2025.6 – 2025.9
Moonshot AI <i>Machine Learning Intern at pre-training team</i> • Participated in developing efficient and stable optimization algorithms (e.g. MuonClip and other variants of Muon) for LLM. • Got hands-on experience with LLM pre-training, covering aspects including scaling, architecture, data.	2025.2 – 2025.6
Jump Trading <i>Quantitative Research Intern</i>	2024.6 – 2024.8

- Conducted alpha analysis for China's stock market.
- Developed a volatility prediction model.
- Designed and implemented a transaction cost prediction model.
